**DETAILED ACTION**

***Allowable Subject Matter***

Claims 8-14 are allowed.

The following is an examiner's statement of reasons for allowance: The above claims are allowed over the prior art of reference in view of the applicant's amendment. Furthermore, Iwaya et al. (5,610,111) is relied upon as it discloses a composition for a thermistor for detecting elevated temperatures (abstract). Although the reference discloses mixing  $Y_2O_3$ ,  $SrCO_3$  and  $SiO_2$  (col 7, lines 30-60), the reference fails to teach all of the instantly claimed method steps nor the specific mixed sintered bodies. The reference also fails to specifically disclose a specific example where M2 is something other than carbon. The reference also fails to disclose that  $Y_2O_3$  and  $M^1M^2O_3$  exist independently and free of lead in the sintered body. It would not have been in the preview of the skilled artisan to practice the instantly claimed method for making a thermistor element. The instantly claimed method would not have been obvious in view of Iwaya or the other references cited.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
